

Capital One

 **DreamVault**

BUSINESS OVERVIEW

Save today. Unlock your dreams tomorrow.

DreamVault is a Capital One savings and payment product designed for young adults ages 18–32. It gamifies the savings process by letting users set financial goals, called “projects,” and earn rewards as they progress. With both a digital wallet and physical card, users can automate savings and access real-world perks. DreamVault makes saving feel engaging, goal-driven, and rewarding.

KEY FUNCTIONS

Smart Controls for Projects

Projects can be updated anytime. Adjust goals or reallocate funds freely, as long as balances stay under a preset limit (e.g., \$1,000). In urgent cases, users can withdraw with a secure bypass code to ensure the change is intentional.

Goal-Based Projects

Users can create personalized savings goals like a new car, vacation, or home directly within their savings account. Each project tracks contributions and displays real-time progress toward the target amount.

Spend from Savings with Ease

Users receive a digital card (and eventually a physical one) linked directly to their savings. Spend anywhere with ease. Earn cash back and rewards when shopping with select partners.

Automated Paycheck Allocation

Set smart rules to automatically divide each paycheck across projects. Example: Allocate 10% to "Car", 5% to "Vacation", and keep the remaining in general savings.

Eno: AI-Powered Savings Assistant

Capital One's AI chatbot, Eno, helps users plan smarter. Recommends savings adjustments based on financial behavior. Answers questions like: "How much should I save weekly to reach \$3,000 in 3 months?"

KEY FUNCTIONS (MILESTONE ROAD)

Reward

If you click on the icon symbolizing the reward, you can learn more about it, such as the company it is associated with and the discount amount.

Eno: AI-Powered Savings Assistant

If you have any questions about your Milestone Road, such as rewards, you can ask Eno.

Overview

The product includes a milestone based rewards system to encourage the customers to save more money into their projects. The Milestone Road gamifies the saving experience, which is particularly attractive to our specific customer segment.

Rewards Index System

The Milestone Road uses an index system that scales proportionally with the goal amount. Smaller rewards are more frequent early on to build motivation, and less frequent larger rewards come later. This index system is created using an AI model.

KEY PARTNERS

Capital One has various existing partnerships with travel, retail, and dining companies, and they could expand to entertainment companies as well. These partnerships would provide additional incentives for users to save more by providing rewards for the Milestones Road. Therefore, the partnerships would also be a source of revenue for DreamVault.

Travel

- Airlines
 - Air Canada
 - British Airways
 - Singapore Airlines
 - Turkish Airlines
- Hotel chains
 - Choice Privileges
 - Wyndham Rewards

Retail

- Adidas
- Macy's
- Dell
- Lowe's
- Samsung
- Ulta
- The Home Depot

Dining

- Michelin Star restaurants
- Fast food **(potential)**

Entertainment

- Movie theaters **(potential)**
- Concerts **(potential)**
- Sports **(potential)**

KEY RESOURCES

Mobile App

DreamVault is a digital product that is integrated into the already existing Capital One mobile app (and website). Therefore, we need technological infrastructure to create a section in the mobile app for DreamVault.

AI

AI is used in two ways for Dream Vault: Eno and the in rewards index system. Eno is the existing AI chatbot that is used for personalized savings suggestions. AI is also used to create a rewards index system to decide when and what rewards to give.

Partner Network

To give the customers rewards from the Milestone Road, Capital One must use its current partnership network from the previous slide (and possibly even expand it). These rewards from our partnerships incentivize customers to progress through their goals or even join Capital One.

PRODUCT CHANNELS

Digital Wallet Integration

- Each user receives a digital card linked directly to their savings account.
- Works like a debit/credit card for online and in-store purchases.
- Encourages smart spending from project-based savings.
- Real-time sync with Capital One app for balance visibility.

Physical Card Option

- Users unlock a physical version of their digital card after reaching key savings milestones.
- Tangible reward that reinforces progress and financial habits.

Flexible Spending Channels

- Card accepted everywhere (not restricted to partners).
- Bonus incentives for spending with select partners (e.g., cash back, discounts), Fast food chains, Travel brands (hotels, airlines)
- Lifestyle merchants

VALUE PROPOSITION MODEL

CUSTOMER GAINS & GAIN CREATORS

CUSTOMER GAINS

GAIN CREATORS

CUSTOMER PAINS & PAIN RELIEVERS

Struggle to Save Consistently

Many young adults want to save but often forget or struggle to stay disciplined making it hard to build momentum toward their goals.

Impulse Spending

Digital payments and shopping apps make it effortless to spend impulsively, making it harder for users to stick to their savings goals.

Lack of Trust in New Tools

Many users are hesitant to trust apps that require linking their bank accounts, especially if they're not from established financial institutions.

Undefined Financial Goals

Users often don't know how much to save or what they're even saving for which leads to a lack of direction and motivation to stick with it.

CUSTOMER PAINS

Frozen funds for focused saving

Fully integrated within Capital One's existing mobile platform. No need to download or manage a separate app.

Spending Shield

Locked vaults with password to withdraw funds early make it harder to impulsively spend saved money.

Built on what you already trust

Fully integrated into Capital One's app — familiar, safe, and doesn't require a separate download.

Goal Clarity with Eno

Eno helps users define clear, achievable savings goals by asking guiding questions and offering personalized recommendations. It can break down big goals into manageable step

PAIN RELIEVERS

PRODUCTS AND SERVICES

Encourages Discipline

Secure Unlock Option: Two-step verification adds friction to early withdrawals and supports thoughtful decisions.

Savings Index System: Rewards are scaled fairly across all goal sizes, promoting equity in motivation.

Makes Progress Tangible

Progress Tracking UI: Visual dashboards show real-time savings progress for each goal.

Gamification Elements: Unlock badges, milestones, and streaks to celebrate progress and build habit loops.

Keeps Users Engaged

Push Notifications & Nudges: Timely reminders and encouragement help users stay on track with goals.

CUSTOMER TASKS

Supporting Jobs

Users can set or edit savings deadlines, adding time-based targets to reach their goals faster or at a more comfortable pace.

They can also provide feedback or report bugs directly to customer support, helping improve the product experience for everyone—bless their helpful little hearts.

Functional Jobs

Users can budget effectively by allocating their income toward specific purposes in a clear, structured way.

By keeping funds intentionally out of easy reach, they're less likely to overspend or sabotage their own savings with late-night impulse buys.

Emotional Jobs

Users can achieve personal dreams by turning their savings into meaningful goals like travel, tech upgrades, or education. Gaining control over their finances helps reduce anxiety or guilt, replacing financial stress with confidence and clarity.

Social Jobs

Users want to feel financially competent and responsible in the eyes of peers, partners, or even nosy parents.

They also seek tools that help them present themselves as organized, goal-driven individuals—whether that's through clean app interfaces or shareable savings milestones.

COST STRUCTURE

REVENUE

Subscription Model

DreamVault allows users to create up to 10 savings projects for free, after which they can pay a small annual subscription fee to unlock unlimited project creation. This low-cost upgrade boosts user engagement and creates recurring revenue. For Capital One, it generates income while increasing retention, product usage, and cross-sell opportunities within the company ecosystem.

Interest Model

DreamVault generates interest revenue from funds held in user savings and project-based accounts, especially those allocated to higher-yield options. As users grow their savings, Capital One earns predictable returns on idle balances. This model adds passive income while incentivizing long-term savings behavior.

Partnership Model

DreamVault partners with brands to offer in-app rewards, cashback deals, and sponsored milestones in the savings journey. These partnerships generate revenue through sponsorship fees, promotional placement, and revenue-sharing models on user spending. For Capital One, this model unlocks scalable monetization while strengthening partner relationships and driving user activity across targeted brands.
