

ConocoPhillips

By: Brendan Kane, Dev Patel, Fatima Danish, & Matthew Walker

Company Overview

- **Introduction:**

- upstream energy company that specializes in the exploration, production, transportation, and marketing of crude oil, natural gas, and natural gas liquids (NGLs).

- **Foundation:**

- Founded in 2002 through the merger of Conoco Inc. and Phillips Petroleum Company, ConocoPhillips is headquartered in Houston, Texas and operates as a leading upstream energy company

- **Presence:**

- Operates in 13 countries with a focus on low-cost, high-margin resource basins, including the U.S. Lower 48, Alaska, Canada, and the Asia Pacific region.

- **Values:**

- ConocoPhillips emphasizes safety, sustainability, innovation, and accountability, with a commitment to responsibly delivering energy to meet global demand.

Financial Overview

52 Week Range: 79.88 - 135.18

P/E Ratio: 11.72

Market Cap: \$115.68B

Shareholder Breakdown

Institutional Influence:

ConocoPhillips is mostly owned by big investment firms like Vanguard, BlackRock, and State Street. These firms own more than 75% of the company’s shares meaning the company is very sensitive to trading actions by such large firms.

Top 10 Holders:

The top 10 shareholders alone hold over 40% of total shares, highlighting a concentrated ownership structure among major institutional investors.

Top 10 Shareholders

Holder Name	% Total Shares Held	Value
Vanguard Group Inc	9.57	\$12.08B
BlackRock Inc	8.1	\$10.22B
State Street Corp	5.79	\$7.31B
JPMorgan Chase & Co	4	\$5.04B
T. Rowe Price Associates, Inc.	3.6	\$4.55B
Capital Research & Mgmt Co	2.46	\$3.10B
Wellington Management Company LLP	2.45	\$3.09B
Geode Capital Management, LLC	2.21	\$2.79B
Massachusetts Financial Services Co	1.99	\$2.51B
Timothy Leach	0.04	\$48.60M
Total	40.20%	\$50.74 B

Insider Influence:

The low insider ownership of 0.32% suggests that company executives and directors hold only a small stake. This may indicate leadership may be less personally invested in the company's stock performance.

Geographical Concentration:

Majority of shareholders are based in the US (64.76%), followed by the UK (8.16%), Canada (2.8%), and Germany (1.75%), this shows they have a strong support from U.S.-based investors.

Financial Stability & Liquidity Position

- ConocoPhillips' Free Cash Flow to Debt Ratio of 0.34x shows it generates enough cash to comfortably handle its debt, which strengthens long-term financial stability.
- The quick ratio of 1.14x and current ratio of 1.29x suggest the company can meet its short-term obligations, though it's slightly less liquid than in past years.
- With \$5.6 billion in cash and \$24.4 billion in operating cash flow, the company is in a strong position to fund operations and invest without relying heavily on borrowing.
- A cash conversion cycle of 0.89x reflects efficient operations, also higher than the industry average of 61 – 62 days, meaning the company quickly turns its resources into cash.

Liquidity Overview

- **Cash & Equivalents:** \$5,607B
- **Cash Conversion Cycle:** 0.89x
- **Operating Cash Flow:** \$24.379B
- **Current Ratio:** 1.29x (< than historical 10 yr ratio of 1.59x)

Debt Covenants & Ratios

- **Free Cash flow to Debt Ratio:** .34x
- **Quick Ratio:** 1.14x (average of 1.33x)
- **Debt-to-EBITDA Ratio:** .99x (historically < 1.5x)
- **Interest Coverage Ratio:** 38.6x

Capital Structure Changes

An aerial photograph of a large offshore oil platform in the middle of a dark, choppy ocean. The platform is a complex of yellow and grey metal structures with various pipes, cranes, and storage tanks. In the background, another smaller platform is visible on the horizon. The sky is overcast and grey.

Core Operations

By: Brendan Kane, Dev Patel, Fatima Danish, & Matthew Walker

Geographical Scope

- ConocoPhillips is an upstream oil and gas company with a global presence across:
 - North America (U.S. Lower 48, Alaska, Canada)
 - Europe (Norway, UK)
 - Asia-Pacific (Australia, Malaysia, Indonesia, China)
 - Middle East (Qatar)

Development Type

- Onshore:
 - U.S. (Permian, Eagle Ford, Bakken), Alaska, Canada (oil sands), Australia (LNG)
- Offshore:
 - Norway, UK, Malaysia, China (Bohai), Qatar

Resource Types

- Conventional:
 - Norway, Alaska, Malaysia, Qatar, China (Bohai)
- Unconventional:
 - U.S. shale plays (Permian, Eagle Ford, Bakken), oil sands in Canada (Surmont)

Major Asset Overview

U.S. Lower 48 and Alaska

US Lower 48

- Permian Basin (Delaware/Midland):
 - Fastest-growing asset; mix of oil and NGLs; core growth engine
- Eagle Ford Shale:
 - Mature asset but still productive; efficient capital deployment
- Bakken Shale:
 - Legacy unconventional; consistent success

Alaska

- Long-life, low-decline oil assets:
 - Prudhoe Bay and Kuparuk
- Major growth project:
 - Willow Development (expected to deliver 180K+ bpd at peak)

Canada and Norway

Canada

- Surmont Oil Sands (SAGD):
 - Steam-Assisted Gravity Drainage recovery
- Large reserves:
 - long-term cash flow despite high SOR (steam-oil ratio)

Norway

- Operates through:
 - Ekofisk, Eldfisk, and other legacy North Sea assets
- Long-life, conventional offshore production

Qatar and Australia

Qatar

- Stake in QatarEnergy's North Field LNG expansion
- Part of ConocoPhillips' LNG growth strategy (supply diversification, higher margins)

Australia

- APLNG (Australian Pacific LNG):
 - Coal seam gas-to-liquified natural gas project; long-term contracts with Asian buyers
- Strong Free Cash Flow contributor

Production & Reserves Trends

Region	Production (MBOED, 2023E)	Reserve Type	Notes
Lower 48	~1,000+	Unconventional liquids/gas	Growth via shale; strong drilling returns
Alaska	~200	Conventional oil	Willow project expected by 2029
Canada	~140	Bitumen	SAGD recovery; high SOR but stable output
Norway	~160	Conventional offshore	Aging assets but efficient operatorship
APLNG (Aus)	~130	Gas (LNG)	Strong demand, long-term contracts
Qatar	Equity interest	LNG	Access to growing Asian gas demand

Production & Reserves Trends

Production (MBOED, 2023E) vs. Region

Production (MBOED, 2023E)

Technologies & Enhanced Recovery

- Machine learning for drilling optimization:
 - Especially in U.S. shale (drill-to-fill strategy)
- Steam-Assisted Gravity Drainage (SAGD) in Surmont
- Pad drilling and zipper fracs to boost lateral productivity in Lower 48
- Carbon Capture and Storage (CCS) in development stages, notably for Surmont and LNG assets
